Customer

# Motivation

- Customers are named « Parties associated to Customers ». We name them hereafter « Customer » for commodity.
- Customers are in fact party entity roles : any party becomes a customer as soon as one or more sales are linked to it.
- **Creation** : a customer can be initially defined by creating an instance using the Menu Tree Item « Parties » or « Parties associated to Sales ».
- **Access** : as long as no sale is linked to that party, it is not recognized as a customer and will only be accessible using the Menu Tree Item « Parties ».
- Note finally that « Party » modules have been activated as explained in the previous document « Basic Functionalities ».

Sale

From State « Quotation » to State « Confirmed » or

From State « Quotation » to State « Processing »

## State transitions

- Upon « Confirm » action by the user, a « Sale » or « Purchase » evolves from state « Quotation » to :
  - State « Confirmed » when a latent sale processing error condition exists
  - State « Processing » when such error does not exist.
- In the present scenario, there is no error condition and the state transition is from « Quotation » to « Processing »

Customer Shipment - State Changes - Actual States

# Motivation

It is certainly possible to process the shipment(s) pertaining to a « Sale » using the « Move » menu item.

However, it is recommended to proceed using the « Customer Shipment » functionality which will manage the following stock moves in a coherent fashion :

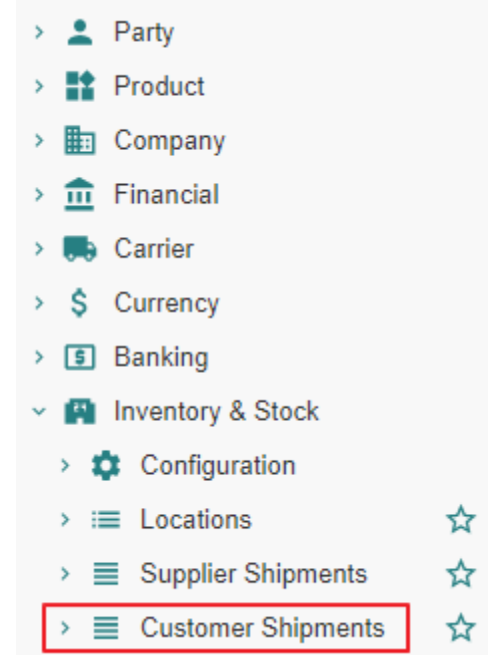

- « Storage Moves » between the warehouse storage location and the warehouse output location
- « Outgoing Moves » between the warehouse output location and the customer location

Customer Shipment  
« Nill » To « Draft »

## Creation

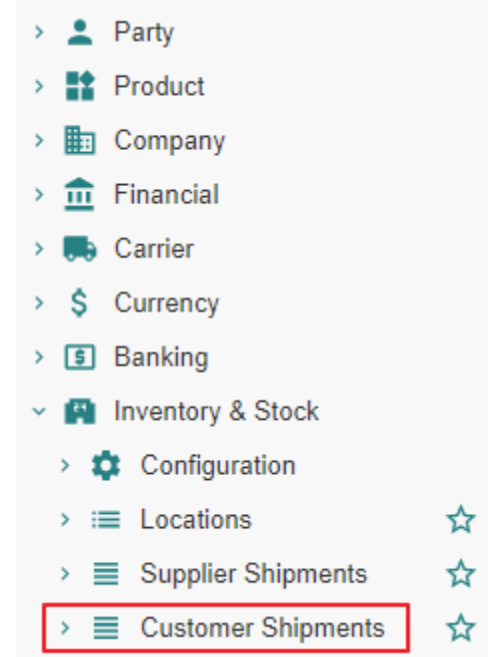

- The « Customer Shipment » is initially created in state « Waiting », not « Draft »
- This occurs when the « Sale » evolves into state « Processing »
- Hence, we do not document the state « Draft » further

Customer Shipment  
« Nill » To « Waiting »

## Creation

- The « Customer Shipment » is created in state « Waiting »
- This occurs when « Sale » evolves into state « Processing »

Customer Shipment  
« Waiting » To « Assigned »

Customer Shipment

## Motivation

# What is posting in accounting?

December 22, 2020

Posting in accounting is when the balances in subledgers and the general journal are shifted into the general ledger. Posting only transfers the total balance in a subledger into the general ledger, not the individual transactions in the subledger.

An accounting manager may elect to engage in posting relatively infrequently, such as once a month, or perhaps as frequently as once a day.

Subledgers are only used when there is a large volume of transaction activity in a certain accounting area, such as [inventory](#), [accounts payable](#), or [sales](#). Thus, posting only applies to these larger-volume situations. For low-volume transaction situations, entries are made directly into the general ledger, so there are no subledgers and therefore no need for posting.
