

Tryton By Example

-

Tryton installation & usage
for first time administrators & users

-

Usage : Basic Functionality

Github - <https://github.com/clixwise/tryton-by-example>

Version of presentation : 01.02 Dated 5-May-21

Version of Tryton : 5.8

Verified for execution on : Windows 10 & Powershell 7

Licence : [CC BY 4.0](#)

Author : Marc Rottiers

Initial Configuration Wizard	Performing Initial Configuration : language, user, module
Operations	Explaining how to perform Operations
Modules	Explaining the concept of Modules
Basic Configuration	Basic Configuration
Country & Currency	Installing Country & Currency
Party & Company & Employee	Installing Party & Company & Employee
User	Installing additional Users
Accounting	Activating Financial modules
Logins	Demonstrate user privileges

Initial Configuration Wizard

Configuration Wizard

This wizard allows :

- To add languages,
- To define new users and
- To activate functional modules

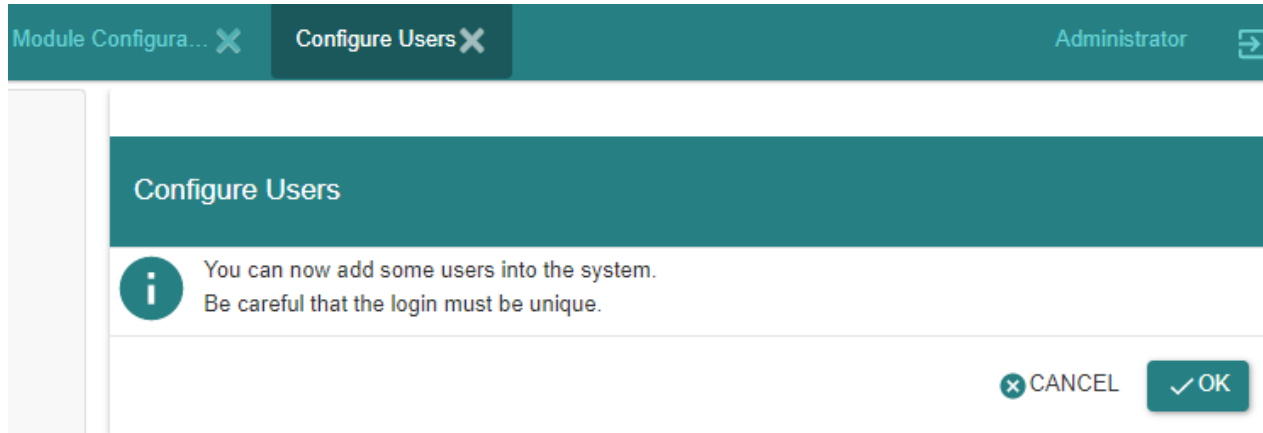

Adding « Languages »

This wizard allows to define new languages

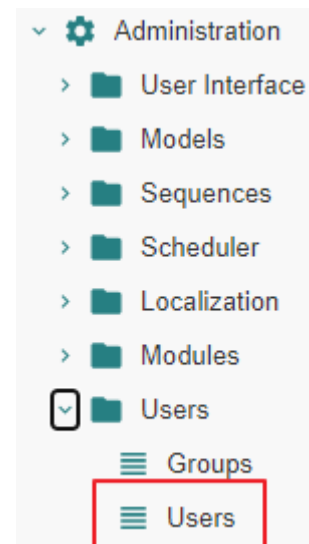

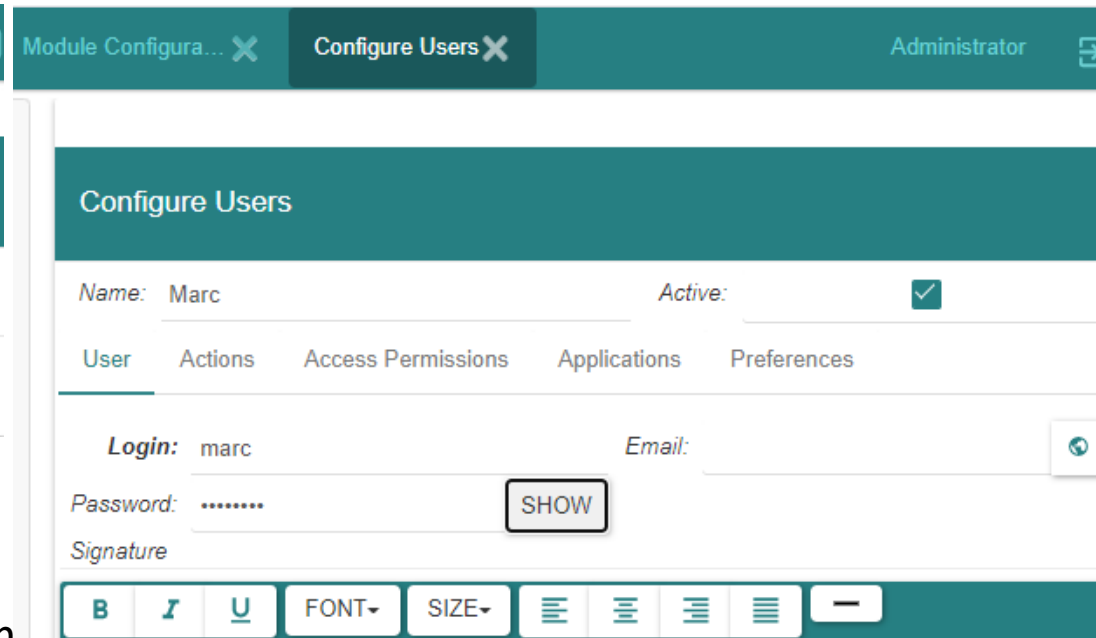

If languages should be added later on, we can access the menu item « Languages »

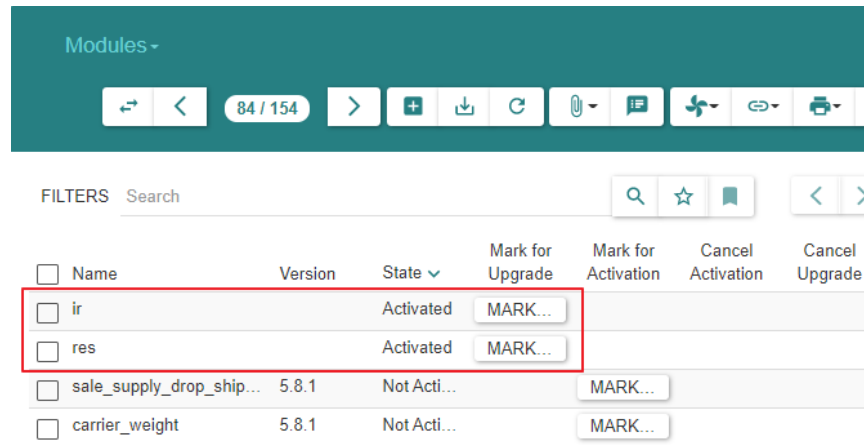

Defining « Users »

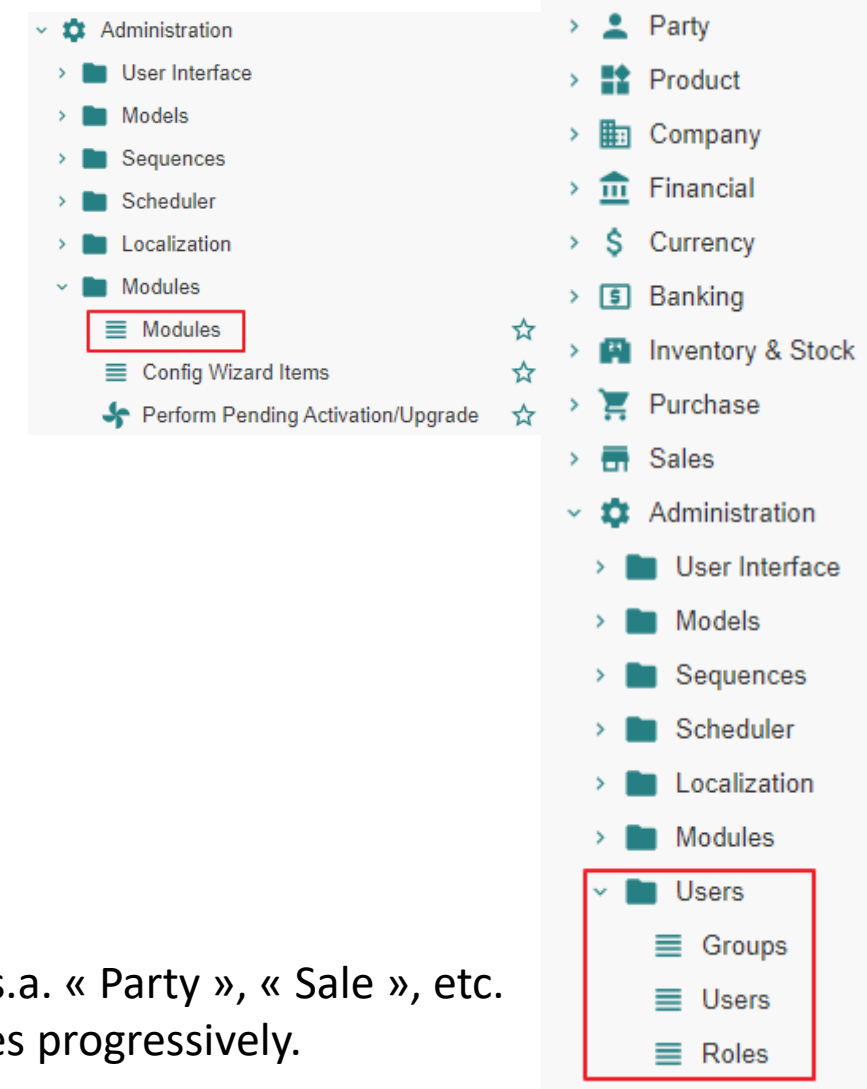

- « User Administrator » is initially used to log into the system
- It is then possible to define additional users
- In this introductory documentation, we nevertheless perform most (if not all) operations with « User Administrator »
- Additional users can be defined later : we access the menu item « Users »
- Note that users cannot be deleted ; they can only be deactivated

Activating « Modules »

<input type="checkbox"/> Name	Version	State	Mark for Upgrade	Mark for Activation	Cancel Activation	Cancel Upgrade
<input type="checkbox"/> ir		Activated	MARK...			
<input type="checkbox"/> res		Activated	MARK...			
<input type="checkbox"/> sale_supply_drop_ship...	5.8.1	Not Acti...		MARK...		
<input type="checkbox"/> carrier_weight	5.8.1	Not Acti...		MARK...		

Initially

- Initially, all but two modules are activated : « ir » and « res »
- We do not activate additional modules at this stage

User Administrator

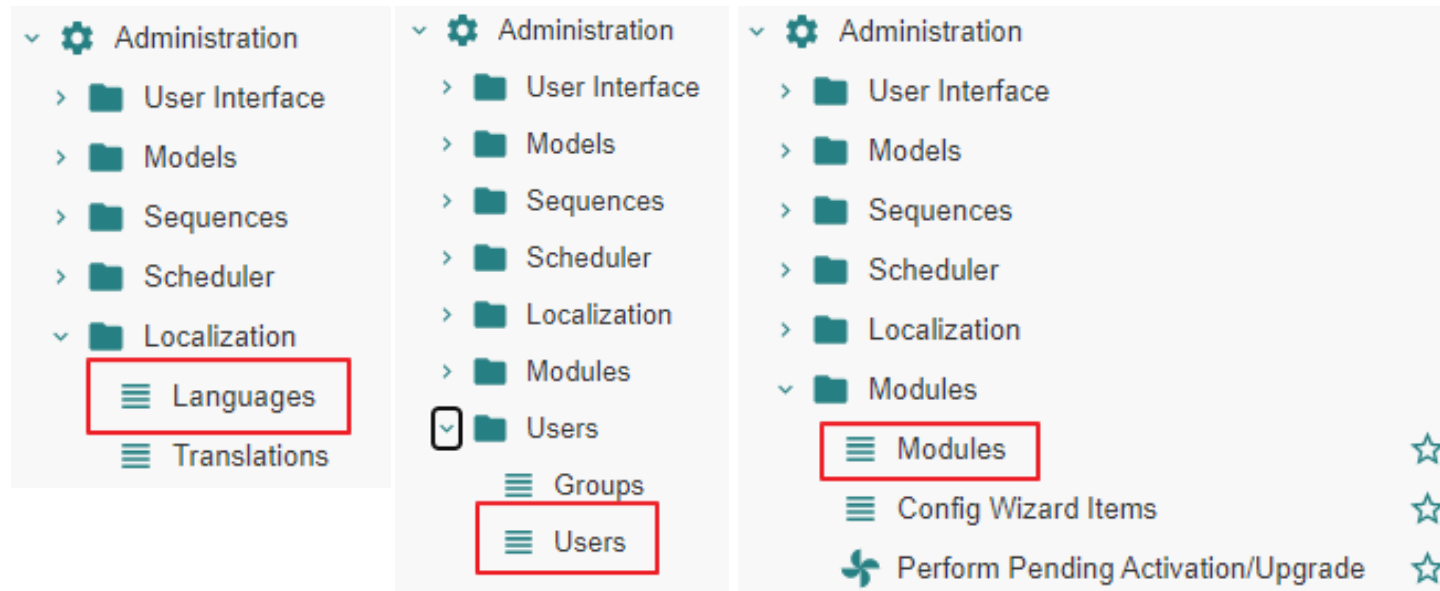

- Modules must be activated for this user to access functional subject areas s.a. « Party », « Sale », etc.
- As we progress in our understanding of the system, we will activate modules progressively.
- We do this by referring to the menu item « Modules ».

Other users

- At the end of this document, we will show how to activate access to subject areas by other users.
- We will do so thru Menu Tree Items « User Groups » or « User Roles ».

Re-executing wizards - Method 1

Wizard operations can be repeated later as well, using Menu items in the Tree on the left of the screen

Re-executing wizards - Method 2

Operations

Motivation

- Before exploring the functional aspects of the system, we explain the different widgets that support navigation in the system and trigger operations on items and item lists.
- Please revisit this section whilst getting acquainted with the system subject areas.

Application - Menu Tree - Triggering operations

State of Menu Tree
when
Initial modules activated

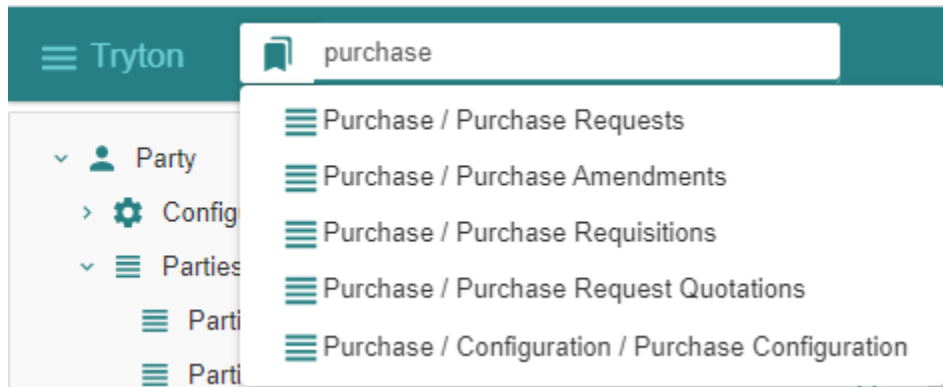

State of Menu Tree
when
All modules activated

- The amplitude of the menu tree depends on which application modules have been activated (i.e. installed) for a given user. See next section.
- Application modules belong to functional subject areas that are reflected in the Menu Tree : « Party », « Product », etc.

Application - Menu Tree - Search for menu item containing e.g. « Purchase »

- A search mechanism exists for the tree of menu items
- Here we assume that the « Purchase » modules have been activated and search for some related functionality

Entity - Filters

- The proposed filter depends on the entity properties
- Here an example for the entity « Party »

Parties -

Entity - Menu Bars - An overview

1. Vertical menu bar displays all possible operations
2. Horizontal menu bar displays some entity or list operations
3. Horizontal menu bars display intra-entity operations

Entity - Menu Bars - Vertical Menu Bar

Parties ▾		
↔ Switch	- 1	- 1 switch view from « item list » to « item »
< Previous	- 2	- 2 « item » : previous in list
> Next	- 3	- 3 « item » : position in list
🔍 Search	- 4	- 4 « item » : next in list
<hr/>		
+ New	- 5	- 5 « item » : start adding
↓ Save	- 6	- 6 « item » : save
🔄 Reload/Undo	- 7	- 7 « item list » or « item » : reload / undo / refresh
📄 Duplicate	- 8	- 8 « item » : duplicate
🗑 Delete	- 9	- 9 « item » : delete
<hr/>		
🕒 View Logs...	- 10	- 10 « item list » : perform operation that is specific of this list
🕒 Show revisions...	- 11	- 11
<hr/>		
📎 Attachment	- 12	- 12 « item » : attach one or more documents (e.g. of type docx, xlsx, etc.)
💬 Note	- 13	- 13 « item » : attach a note
🌀 Action	- 14	- 14 « item » : actions that are specific of the entity
<hr/>		
🔗 Relate	- 15	- 15
🖨 Print	- 16	- 16 « item » : print
✉ E-Mail...	- 17	
<hr/>		
📤 Export	- 18	- 17
📥 Import	- 19	- 18
<hr/>		
✕ Close Tab		- 19

Entity - Menu Bars - Horizontal Menu Bar

- 1 switch view from « item list » to « item » (*)
- 2 « individual record » : previous in list
- 3 « individual record » : position in list
- 4 « individual record » : next in list
- 5 « individual record » : start adding
- 6 « individual record » : save
- 7 « individual record » and « record list » : reload / undo / refresh
- 8
- 9
- 10 « record list » : perform operation that is specific of this list
- 11
- 12 « individual record » : print
- 13

Entity - « Item Double-Click » vs « Menu Item Navigation »

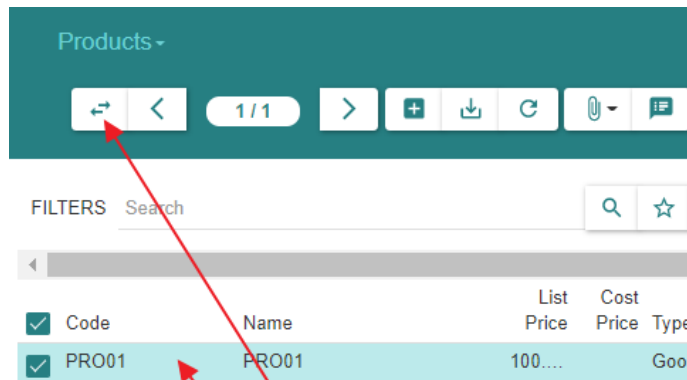

When displaying a list of items, double-click on one of them mostly generates the same result as « <- -> ».

There are however exceptions whereby :

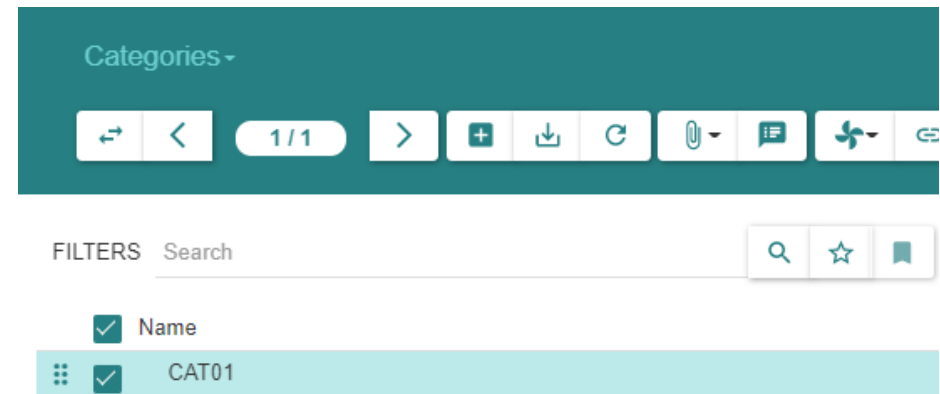

- « <- -> » displays either nothing or details about the item itself.
- « double-click » provides a « drill-down view » of objects belonging to the item

Examples

- « Chart of Accounts » <- -> : displays nothing
- « Chart of Accounts » double-click : displays the transactions for that account
- « Product Category » <- -> : displays details about the category
- « Product Category » double-click : displays the « Products » that belong to this « Category »

Double click or <- -> : same result

Double click : Products by Category (drill-down)
<- -> : Properties of Category

Application or Entity - Data Refresh Requirements

Sometimes it is necessary to refresh the screen using the « Browser Page Reload » button or the relevant menu item (see below).

This may happen e.g.

- In the case of « Switching » from « Item » view to « List » view. For instance, when state information in a « Sales Order », e.g. « Draft », has been changed in the « Item » view it might incorrectly persist in the « List » view though it has evolved e.g. to « Confirmed ».
- In the case of updating the « List of Product » sold by a « Supplier » then displaying the « Product » to show the « List of Suppliers »
- In the case of adding a « Product Variant » in the « List of Variants », it is necessary to refresh the « Product » itself to take the variant into account on the screen

Modules

Motivation

The « Application » is implemented by « Modules » that use « Database Tables » and « Files » optionally. Modules are not *explicitly* grouped into functional subject areas.

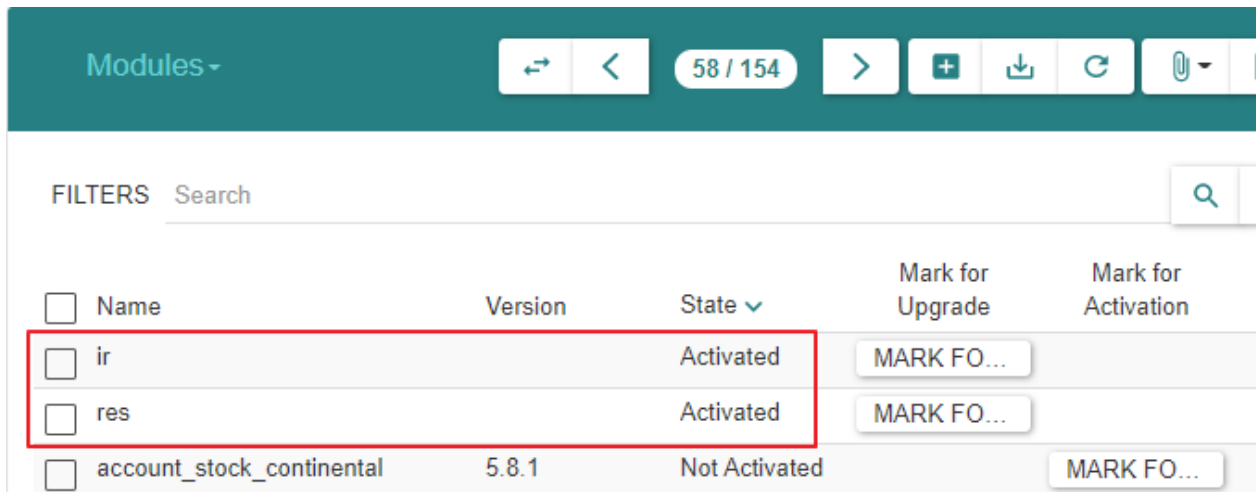

Initially, all but two modules (« ir » & « res ») are inactivated : see below.

The activation relies technically

- Either on the usage of wizards and a mutual dependency mechanism.
- Or based on their name by grouping them based on their prefix.

When modules are activated,

- The database tables they use are created if required.
- The menu items are added in the Tree on the left of the screen.

<input type="checkbox"/> Name	Version	State ▼	Mark for Upgrade	Mark for Activation
<input type="checkbox"/> ir		Activated	MARK FO...	
<input type="checkbox"/> res		Activated	MARK FO...	
<input type="checkbox"/> account_stock_continental	5.8.1	Not Activated		MARK FO...

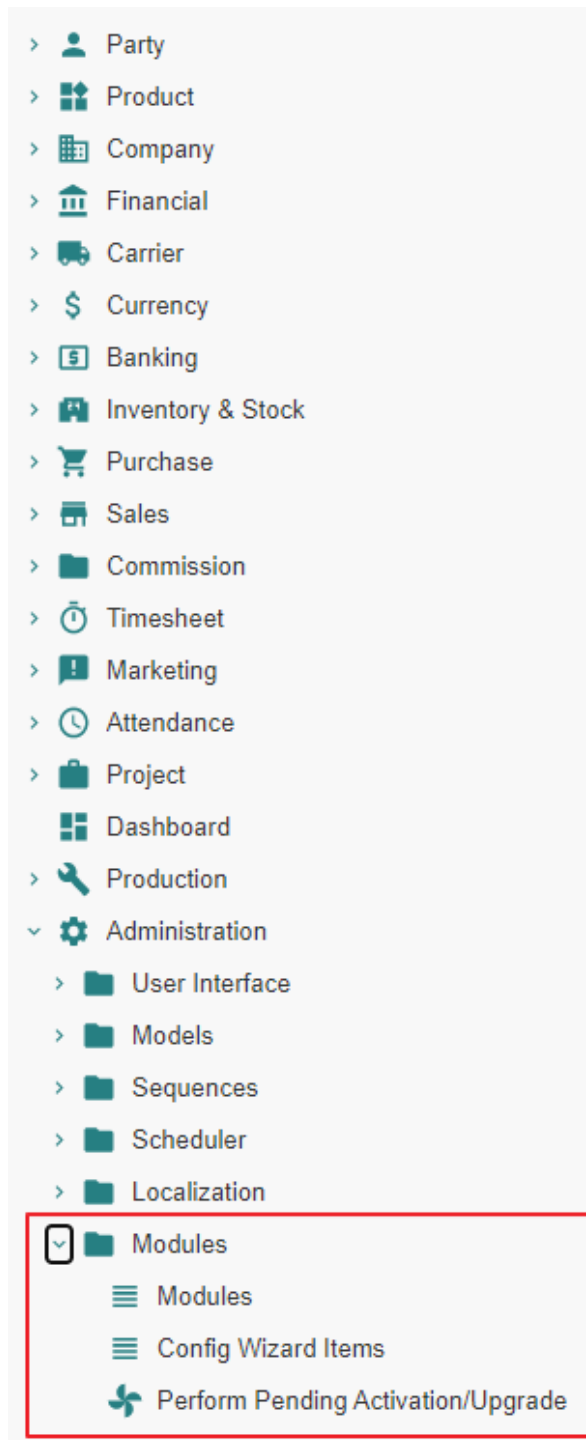

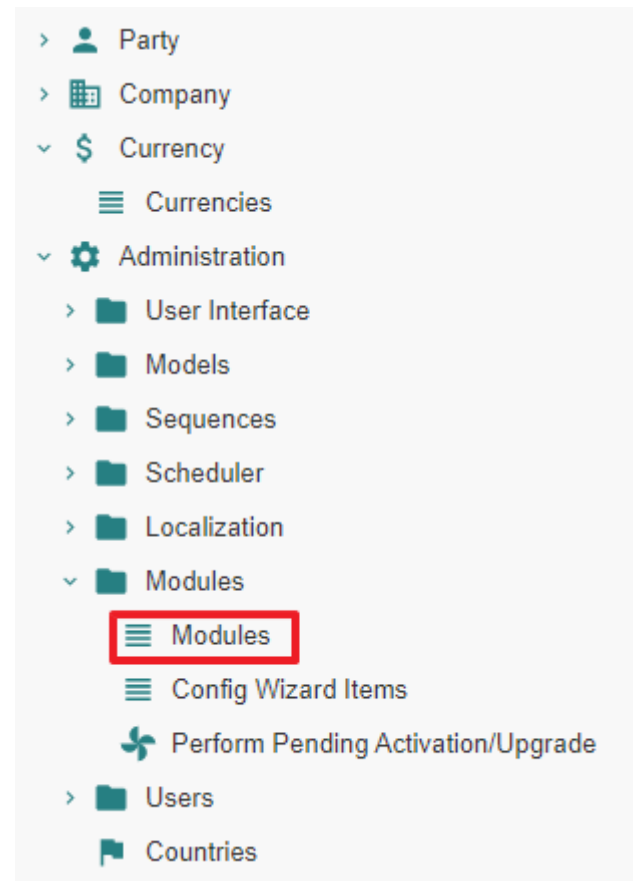

Modules

- Tryton optimizes operations by requiring activation of application modules.
- We will activate modules as we progress instead of activating all modules at once

Modules						
144 / 1...						
Perform Pending Activation/Upgrade						
Translate view						
FILTERS Search						
<input type="checkbox"/> Name	Version	State	Mark for Upgrade	Mark for Activation	Cancel Activation	Car
<input type="checkbox"/> res		Activated	MARK FOR UPGRADE			
<input type="checkbox"/> party_relationship	5.8.1	Activated	MARK FOR UPGRADE			
<input type="checkbox"/> ir		Activated	MARK FOR UPGRADE			
<input type="checkbox"/> currency	5.8.1	Activated	MARK FOR UPGRADE			
<input type="checkbox"/> party	5.8.1	Activated	MARK FOR UPGRADE			
<input type="checkbox"/> country	5.8.1	Activated	MARK FOR UPGRADE			
<input type="checkbox"/> party_siret	5.8.1	Activated	MARK FOR UPGRADE			
<input type="checkbox"/> user_role	5.8.1	Activated	MARK FOR UPGRADE			
<input type="checkbox"/> company	5.8.1	Activated	MARK FOR UPGRADE			
<input type="checkbox"/> company_work_time	5.8.1	Activated	MARK FOR UPGRADE			
<input type="checkbox"/> stock_supply	5.8.1	Not Activated		MARK FOR ACTIVAT...		
<input type="checkbox"/> stock_secondary_unit	5.8.1	Not Activated		MARK FOR ACTIVAT...		

Modules

Growing list of menu items : initial & final list of menu items as modules are being installed

Modules

Entity	Module activation	User handling
Product	product-*	Creating product & variants
Party associated with Purchase	purchase-*	Creating supplier
Supplier Invoice		
Supplier Shipment	stock-*	
Purchase	purchase-*	Creating purchase order
Supplier Shipment		Creating supplier shipment
Supplier Invoice		Creating supplier invoice

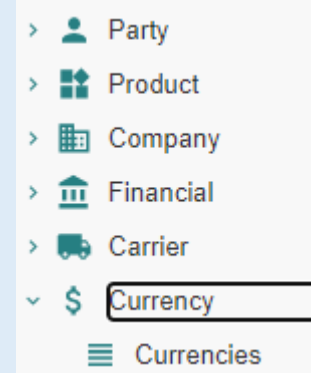

Functional intent of module can be derived from its name

Basic Configuration

Motivation

- Before examining the typical ERP transactions like « Sales », etc. we need to activate modules that support the different subject areas.
- This link refers to official documentation about a « basic configuration » :
https://tryton-administration-manual.readthedocs.io/en/latest/basic_config.html

« Country » & « Currency »

Motivation

The TRYTON database and application contain minimal database tables and application modules.

« Countries » and « Currencies » are extensively used. Hence, it is advised to :

1. Activate the corresponding application modules thereby also creating the required tables in the database.
2. Load the created tables with ISO normalised « Currency » and « Country » data

Finally, for each « Currency » of use in the « Company » operations, it is advised :

- To set the « Rate » property to 1.0 for a « Reference Currency » ; f.i. « EUR rate » = 1.0
- To set the « Rate » property to a relative value for each « Relative Currency » ; f.i. « USD rate » = 1.2
- When the « Company » operates in a single currency environment, the « 1.0 » multiplication factor is used
- When the « Company » operates in a multi-currency environment, each currency-related rate is used in addition as multiplication factor

📁 Countries

Note :

- Use TRYTON « Reload » operation to refresh and display
- « Countries » & « Currencies » appear in the Tree Menus
- When clicking on « Countries or « Currencies », the data panel remains empty : we still need to load the database tables

State « Post »

- There are 3 additional « country » tables
- There are 2 additional « currency » tables
- All tables are still empty

Database – Loading the Tables

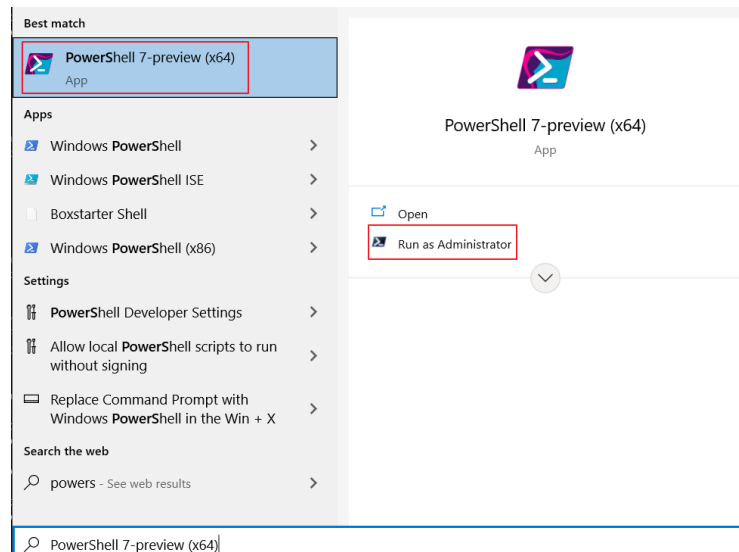

Documentation

- [<https://discuss.tryton.org/t/data-base-importing-countries-or-currencies/3811/7>]
- Special credits to David Harper

List of scripts related to some of the topics covered in this document

- The « *.ps1 » files are Powershell scripts
- Powershell can be accessed as indicated
- The above scripts need some tuning with respect to the exact operation to be performed
- The scripts are executed as e.g. :
./"Tryton 5.8 - Doc 05.01 - Basic functionality.import.tryt01.countries"

Load TRYTON tables “Countries” & “Currencies”	
Tryton 5.8 - Doc 05.01 - Basic functionality.import.tryt01.countries	Fill tables with ISO countries
Tryton 5.8 - Doc 05.01 - Basic functionality.import.tryt01.currencies	Fill tables with ISO currencies

Currency Rates

Motivation

- Multi-currency operations are supported
- In this is required, we need to define the rates for :
 - A « Reference Currency Rate » ; that rate will be 1.0
 - One or more « Relative Currency Rates » ; those rates will be relative to the reference rate.
- Exemple :
 - Our reference currency is EUR : its rate is 1.0
 - One or our relative currencies is USD : ist rate is 1.2 (2021)
- For each relative currency, we define as many dates as we want considering those dates are « Dates From » for the relative rate applicable from that moment onward.

Setting a « Reference Currency Rate » as of « Date from »

Name: Euro **Symbol:** € **Active:** ☒

Code: EUR **Numeric Code:** 978

Rounding factor: 0.01 **Digits:** 2 **Cash Rounding Factor:**

Rates

« EUR » is our « Reference Currency Rate ».
Hence we set the rate at value 1.0

Current rate: 1.000000

Rates

Date	Rate
✓ 2021-01-01	1.000000

Party

Product

Company

Financial

Carrier

Currency

Currencies

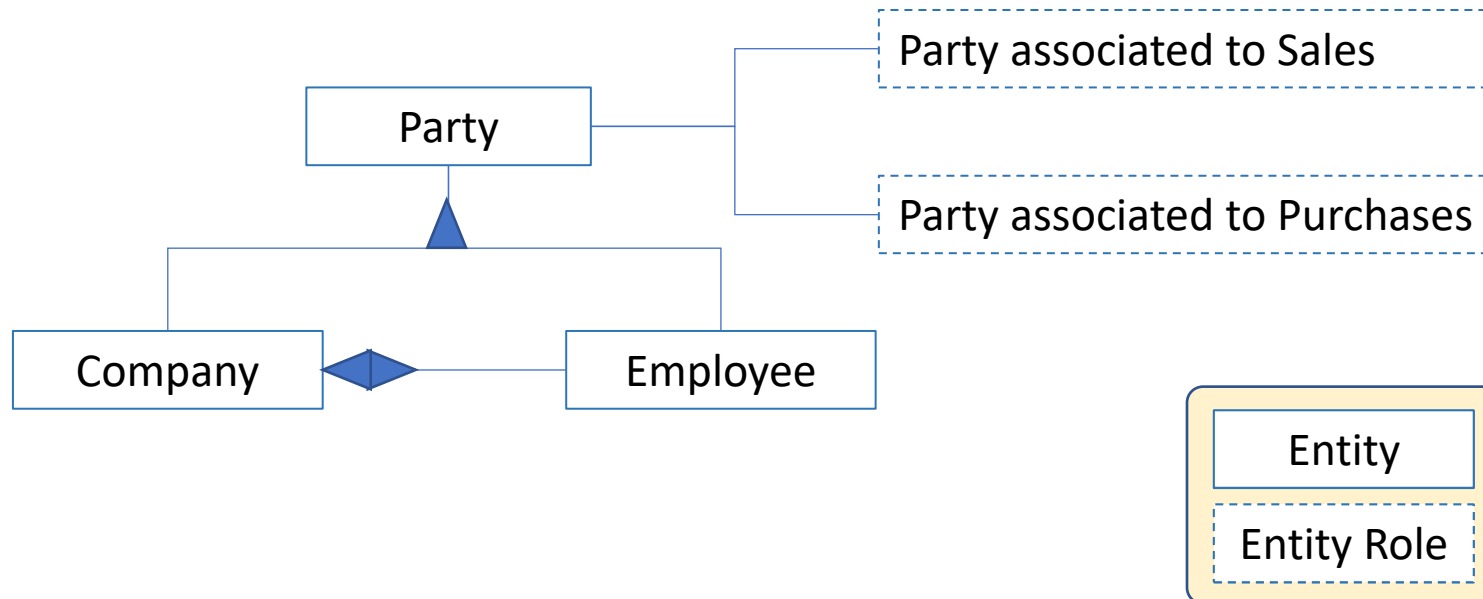

- « USD » is used in our « Company »
- So one of the « Relative Currency Rates » pertains to that « Currency ». Hence we set the rate at value 1.2 as of 2021-01-01 with respect to the « EUR »
- We can define additional « Relative Currency Rates »
 - For other currencies
 - For other « Date from » values

« Party » & « Company » & « Employee »

Motivation

We activate modules and create database content related to the following entities :

1. « Party » : an entity that represents some ERP-relevant actor
2. « Company » : a specialized « Party » entity
3. « Employee » : a specialized « Party » entity
4. « Parties associated to Sales » : a « Party » role (activated and installed later)
5. « Parties associated to Purchases » : a « Party » role (activated and installed later)

Motivation

« User » vs. « Party »

- A « User » is a user of the system with login and password.
- A « User » is not a « Party ».
- A « User » is not necessarily an « Employee » of the « Company ». F.i. he/she can be a consultant.
- The default user is « admin ».

« Party »

Motivation

A « Party » is an abstract entity that stands for the common properties of a specialized concrete entity such as « Company », « Employee », « Party associated to Purchase », etc.

We activate the modules that relate to « Party ». Subsequently, we define concrete parties :

The first approach for defining a specialized entity is :

- First define a « Party » with the idea that it will be referenced by a specialized entity.
- Subsequently define the specialized entity (e.g. a « Company ») with reference to its generic « Party » parent.

The second approach for defining a specialized entity is :

- Define the specialized entity like « Company »
- Doing so, the system lets you create the generic « Party » entity on the fly

Creation of Parties

« Party », « Company » & « Employee »

- A « Party » is an abstract entity.
- Its concrete subentities are of type « Company », « Employee », etc.
- We can define the corresponding abstract and concrete entities in two ways :
- **Method 1 :**
 - We define a « Party » « X » or « Y » by clicking on « Parties », and fill their properties conformant those inherited by the concrete entity
 - Subsequently, we define :
 - The « Company » « X » by referencing its corresponding « Party » « X »
 - The « Employee » « Y » by referencing its corresponding « Party » « Y »
- **Method 2 :**
 - We define a « Party » « X » or « Y » by clicking on « Parties », and fill their properties conformant those inherited by the concrete entity
 - We define the « Company » « X » by clicking on « Companies » and in doing so we create « Party » « X » in the process
 - We define the « Employee » « Y » by clicking on «Employees » and in doing so we create « Party » « Y » in the process
- We will use Method 1 for defining a « Company » COM01
- We will use Method 2 for defining an « Employee » EMP01

Modules - Activation

- Activating the « Company » modules creates the Menu Tree Items for « Company » as well as « Employee »
- When an indented Menu Tree Item construction exists, it means that e.g. « Companies » can be displayed as a tree of « Companies » as well as a list.
 - The top level « Company » menu will display the « Companies » in a tree manner.
 - The bottom level « Company » will display the « Companies » in a list manner.

Create « Company » COM01

« Financials »

« Chart of Accounts » & « Fiscal Year and Period » & « Journal »

Documentation

[https://tryton-administration-manual.readthedocs.io/en/latest/basic_config.html#installing-a-chart-of-accounts]

[<https://tryton-administration-manual.readthedocs.io/en/latest/accounts.html>]

Precondition

- Before activating the Financial Modules, it is advised to properly configure the « Administrator » user
- The user should reference :
 - The « Current Company » field with e.g. « COM01 » i.e. the company for which the « Chart of Accounts » will be created.
 - An « Employee » field with e.g. « EMP01 » who is part of « Company COM01 »
- Under those conditions, at the end of module activation, a « Create Chart of Accounts » wizard will be able to reference « COM01 » and create the chart of accounts appropriately.

The screenshot displays the 'Users' management interface. At the top, there's a header with 'Users' and navigation icons. Below this, the 'Administrator' user profile is shown with fields for Name, Active status, Login, Password, Email, and a 'SHOW' button. The 'Main Company' and 'Current Company' are both set to 'COM01', and the 'Current Employee' is set to 'EMP01'. A table below shows the employee assignment for 'EMP01' to 'COM01' with a start date of '2021-04-01'.

Party	Company	Supervisor	Start Date	End Date
<input checked="" type="checkbox"/>	EMP01	COM01	2021-04-01	

Error conditions

- If « User Administrator » activates financial modules without referencing « Company COM01 », the creation of the « Chart of Accounts » will have to be aborted. Should this be the case, we will show how to recover from this situation and, more generally, show how to execute once again a previously aborted wizard.
- If « User Administrator » activates financial modules without referencing « Employee EMP01 », the Menu Tree Item « Financial » is not created in the left pane. We have not found a way to recover from this error situation besides restoring the database in a state « before »

The screenshot displays the 'Users' management interface. At the top, there is a teal header bar with the title 'Users' and a series of navigation and action icons. Below the header, the user profile for 'Administrator' is shown. The 'Name' field is highlighted with a red box. To the right of the name is the 'Active' status, which is checked. Below the name field is a tabbed interface with tabs for 'User', 'Actions', 'Access Permissions', 'Applications', and 'Preferences'. The 'User' tab is selected. Under the 'User' tab, the 'Login' is 'admin' and the 'Email' is 'x@g.c'. There are fields for 'Password' (masked with dots) and a 'SHOW' button, and a 'RESET PASSWORD' button. Below these are two rows of dropdown menus, each highlighted with a red box. The first row contains 'Main Company:' and 'Current Company:'. The second row contains 'Current Employee:' and 'Current Warehouse:'. A search icon is visible at the end of the second row.

A screenshot of a database management interface showing a list of tables. The list is titled 'Tables (354)' and contains several entries, each preceded by a right-pointing arrow and a small table icon. The entries are: 'account_account', 'account_account_deferral', 'account_account_tax_rel', 'account_account_template', 'account_account_template_tax_rel', 'account_account_type', and 'account_account_type_template'. The first four entries are enclosed in a green rectangular box, and the last two entries are enclosed in a red rectangular box.

Account Types (1/2)

The screenshot shows a sidebar menu on the left with the following structure:

- > Party
- > Product
- > Company
- > Financial
 - > Configuration
 - Account Configuration
 - Templates
 - General Account
 - Account Types (highlighted with a red box)
 - Account Types
 - Accounts
 - Fiscal Years
 - Journals
 - Taxes
 - Payment Terms
 - Analytic Account
 - Pavments

The main content area is titled "Account Types" and contains a "FILTERS" section with a search bar. Below the search bar, there is a list of filters with checkboxes:

- ☐ Name
- ☒ Plan de types de compte (France)
- ☐ Actif
 - Capital souscrit - non appelé
 - Actifs immobilisés
 - Actif circulant
- Charges à répartir sur plusieurs exercices
- Primes de remboursement des emprunts
- Écarts de conversion actif
- Passif
- Hors bilan

The screenshot shows the "Account Types" configuration page with the following form fields:

- Name: Plan de types de compte (France)
- Company: COM01 (highlighted with a red box)
- Statement: (empty)
- Parent: (empty)
- Stock: ☐

The « Account Type » contains a reference to the « Company ».

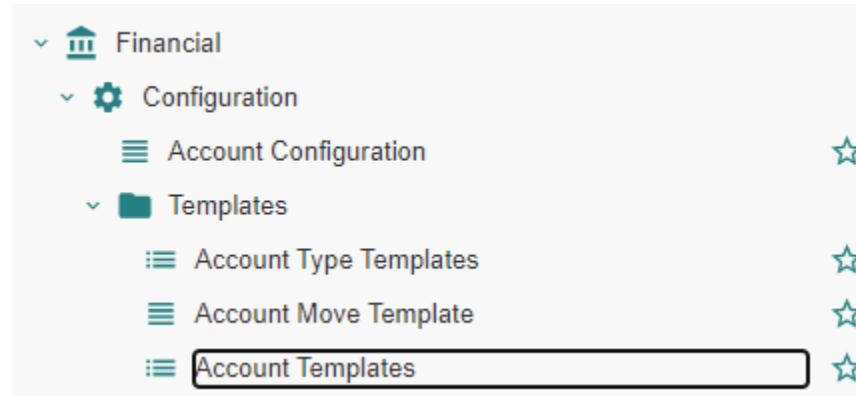

This contrasts with the « Account Type Template » which does not

Problem with closed accounts

[<https://discuss.tryton.org/t/value-for-field-account-is-not-valid/3106/9>]

```
Select * from account_account where closed = true;
UPDATE account_account SET closed = false WHERE closed = true;
```

Marc

4d

I hit the same problem with the « French » chart of account whilst creating a Sales Order. What I did :

- Run the query « Select * from account_account where closed = true; » in « Postgres / pgadmin4 »
 - This query confirmed that 252 accounts were « closed »
 - I did not bother to find out which one
 - Run the query « UPDATE account_account SET closed = false WHERE closed = true; »
 - That solved the problem : I could advance the Sales Order to « Process »
- Suggestion : whilst processing the sales order, to have the error message display one such account encountered in this state up until there are no more in that state.

Query Editor

```
1 Select * from account_account where closed = true;
```

Data Output

	id [PK] integer	closed boolean	code character varying	company integer	cre tim
1	545	true	411		1 202
2	338	true	1013		1 202
3	76	true	101		1 202

Query Editor

```
1 Select * from account_account where closed = true;
3 UPDATE account_account SET closed = false WHERE closed = true;
```

Data Output

UPDATE 251

Query returned successfully in 103 msec.

Query Editor

```
1 Select * from account_account where closed = true;
3 UPDATE account_account SET closed = false WHERE closed = true;
```

Data Output

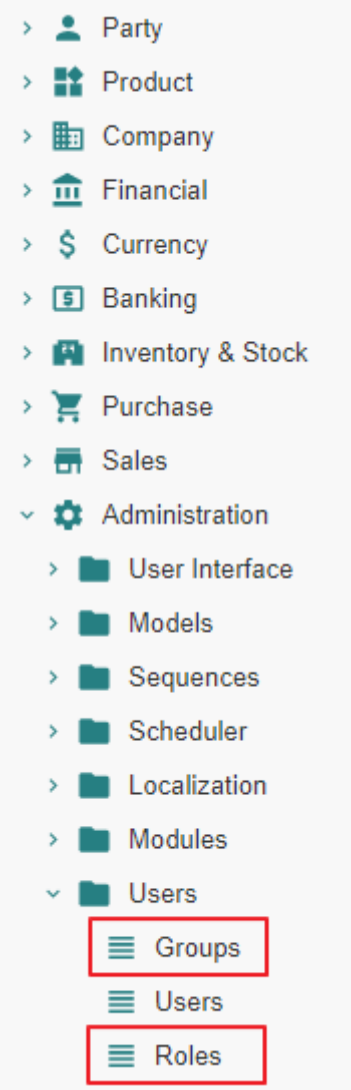

UPDATE 251

Query returned successfully in 103 msec.

Motivation

- We experiment in changing user authorizations with respect to accessing subject areas in the application
- The « User Administrator » can tailor this by exercising « User Groups » and « User Roles »

User Capabilities - Ante

State - User Capabilities

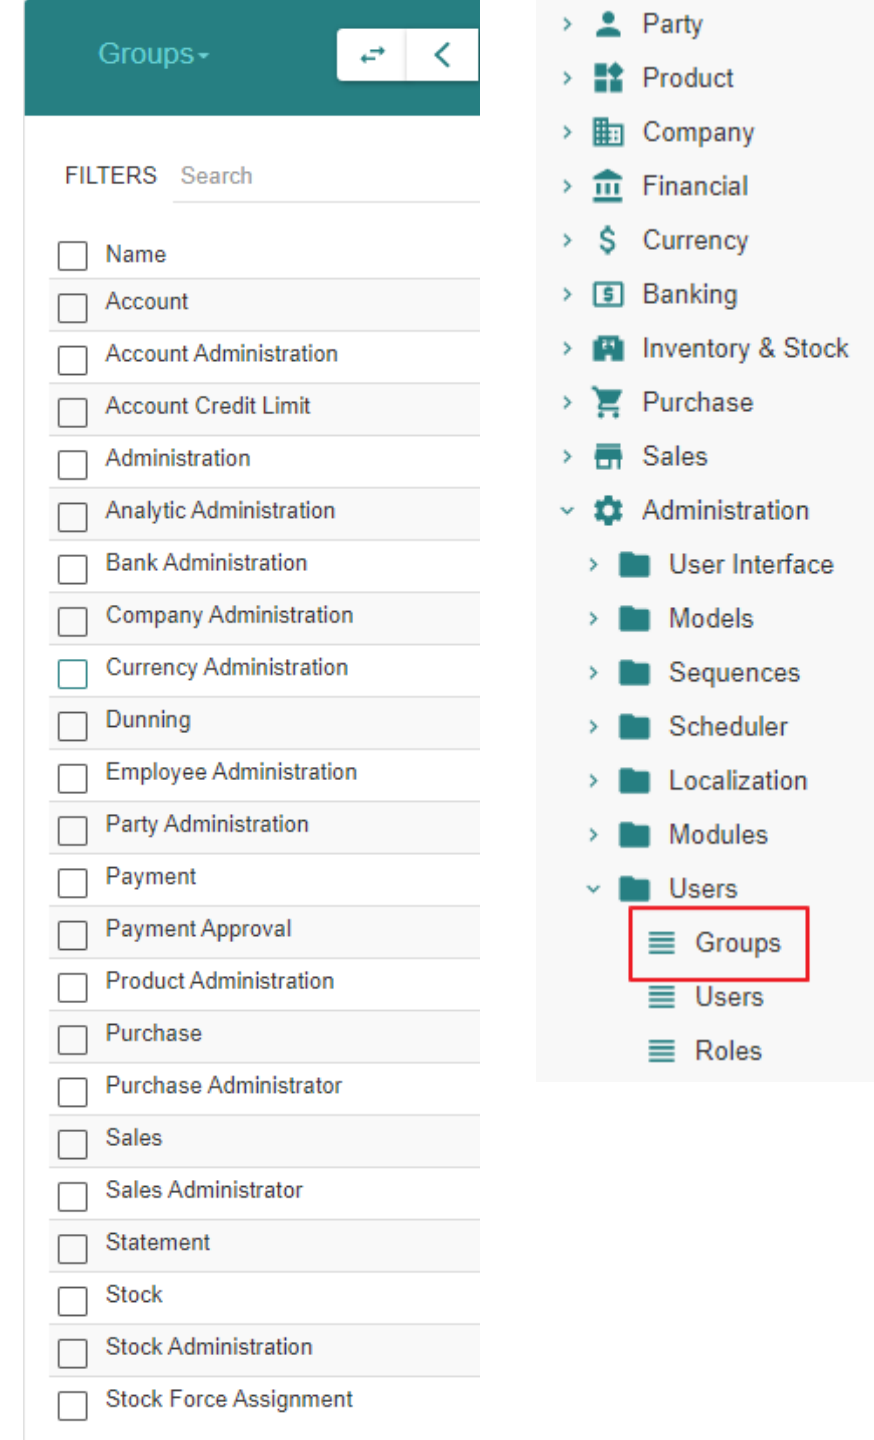

User Groups - Modify

List of « User Groups »

Linking the « User » and the « Group » is possible in two ways :

- Method 1 : displaying the choosen group then linking the user to it
- Method 2 : displaying the choosen user then linking the group to it

Attach « User Marc » to a « User Group » - Method 1

 - Roles

Attach « User Paula » to a « User Role » 1/2

- Once a « Role » is defined, it can be referenced by a « User »
- Attaching a « Role » allows also to restrain the « from » and « to » dates

The screenshot displays the 'Users' management interface. At the top, a teal header bar contains the 'Users' label and a series of icons for navigation and actions. Below this, the user 'Paula' is selected, with an 'Active' checkbox checked. The 'Access Permissions' tab is active, showing a table of roles assigned to the user. A red box highlights the role 'Currency & Country Administration' with a 'From Date' of '2021-01-01' and a 'To Date' of '2021-12-31'. A red arrow points from this role to the 'Groups' section below, which shows a list of groups with 'Company Administration' selected.

Role	From Date	To Date
<input checked="" type="checkbox"/> Currency & Country Administration	2021-01-01	2021-12-31

Groups
<input checked="" type="checkbox"/> Company Administration
<input type="checkbox"/> Currency Administration

Attach « User Paula » to a « User Role » 2/2

- We must remember that « User Paula » has no reference so far to « Company COM01 »
- In order to obtain the intended result for « User Paula », i.e. displaying the « Country » and « Currency » Menu Tree Items, we must add that reference.
