Initial Configuration Wizard	Performing Initial Configuration : language, user, module
Operations	Explaining how to perform Operations
Modules	Explaining the concept of Modules
Basic Configuration	Basic Configuration
Country & Currency	Installing Country & Currency
Party & Company & Employee	Installing Party & Company & Employee
User	Installing additional Users
Accounting	Activating Financial modules
Logins	Demonstrate user privileges

Initial Configuration Wizard

Configuration Wizard

This wizard allows :

- To add languages,
- To define new users and
- To activate functional modules

Adding « Languages »

This wizard allows to define new languages

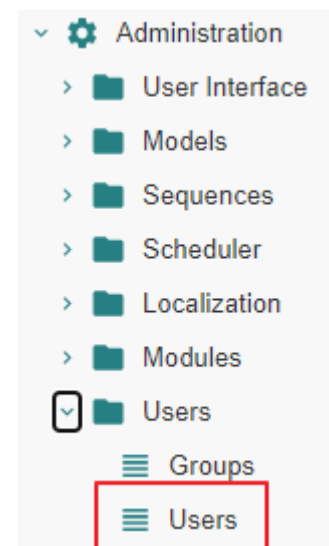

If languages should be added later on, we can access the menu item « Languages »

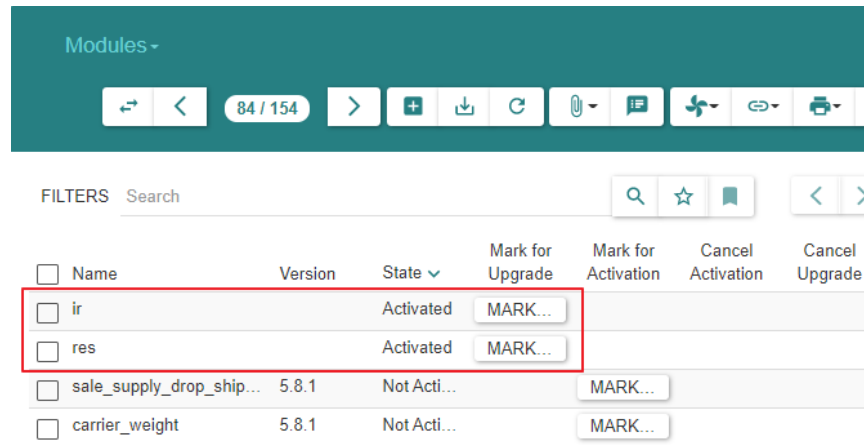

Defining « Users »

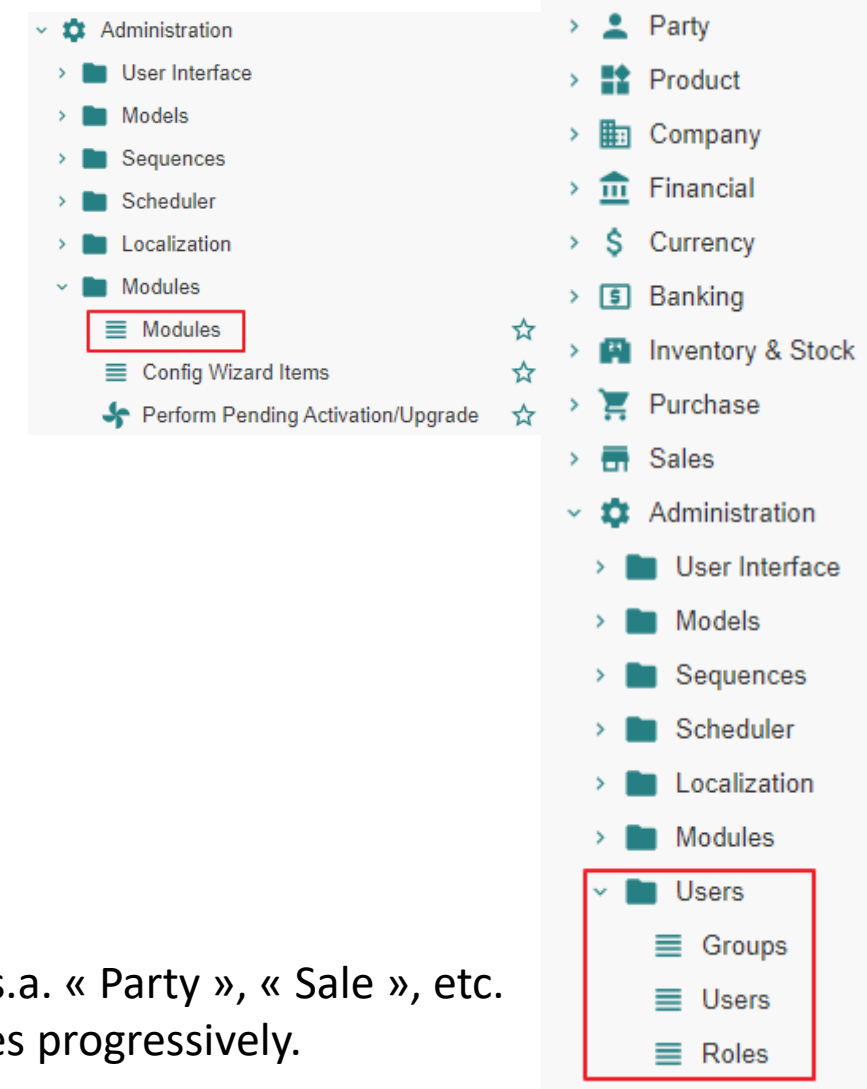

- « User Administrator » is initially used to log into the system
- It is then possible to define additional users
- In this introductory documentation, we nevertheless perform most (if not all) operations with « User Administrator »
- Additional users can be defined later : we access the menu item « Users »
- Note that users cannot be deleted ; they can only be deactivated

Activating « Modules »

<input type="checkbox"/> Name	Version	State	Mark for Upgrade	Mark for Activation	Cancel Activation	Cancel Upgrade
<input type="checkbox"/> ir		Activated	MARK...			
<input type="checkbox"/> res		Activated	MARK...			
<input type="checkbox"/> sale_supply_drop_ship...	5.8.1	Not Acti...		MARK...		
<input type="checkbox"/> carrier_weight	5.8.1	Not Acti...		MARK...		

Initially

- Initially, all but two modules are activated : « ir » and « res »
- We do not activate additional modules at this stage

User Administrator

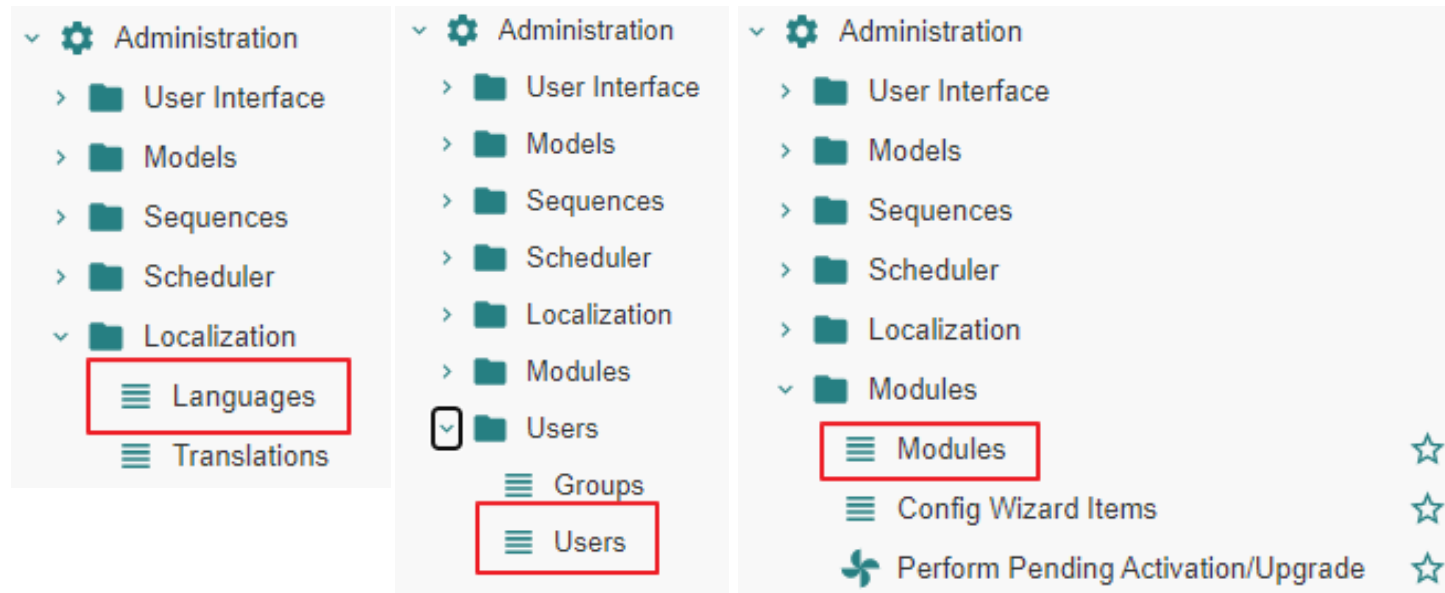

- Modules must be activated for this user to access functional subject areas s.a. « Party », « Sale », etc.
- As we progress in our understanding of the system, we will activate modules progressively.
- We do this by referring to the menu item « Modules ».

Other users

- At the end of this document, we will show how to activate access to subject areas by other users.
- We will do so thru Menu Tree Items « User Groups » or « User Roles ».

Re-executing wizards - Method 1

Wizard operations can be repeated later as well, using Menu items in the Tree on the left of the screen

Re-executing wizards - Method 2

We need to reopen the wizard in order to execute it again

Operations

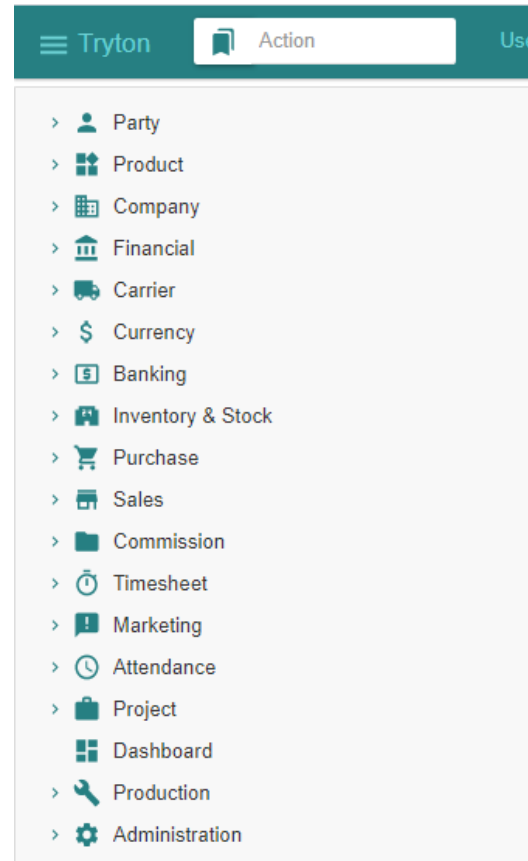

Motivation

- Before exploring the functional aspects of the system, we explain the different widgets that support navigation in the system and trigger operations on items and item lists.
- Please revisit this section whilst getting acquainted with the system subject areas.

Application - Menu Tree - Triggering operations

State of Menu Tree
when
Initial modules activated

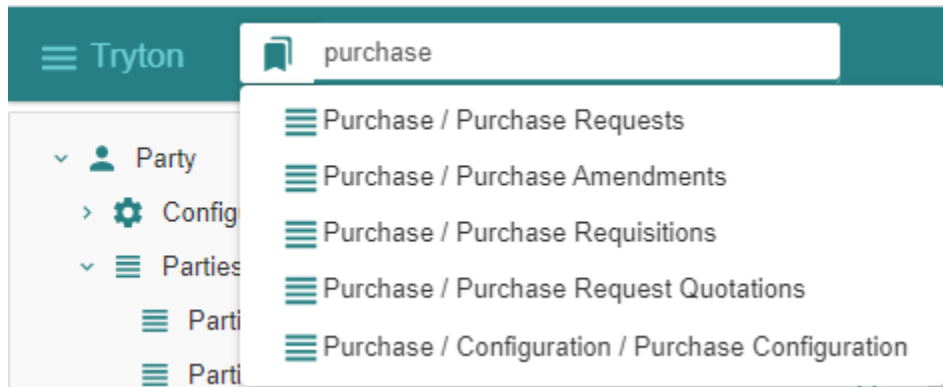

State of Menu Tree
when
All modules activated

- The amplitude of the menu tree depends on which application modules have been activated (i.e. installed) for a given user. See next section.
- Application modules belong to functional subject areas that are reflected in the Menu Tree : « Party », « Product », etc.

Application - Menu Tree - Search for menu item containing e.g. « Purchase »

- A search mechanism exists for the tree of menu items
- Here we assume that the « Purchase » modules have been activated and search for some related functionality

Entity - Filters

- The proposed filter depends on the entity properties
- Here an example for the entity « Party »

Parties -

FIND

Entity - Menu Bars - An overview

1. Vertical menu bar displays all possible operations
2. Horizontal menu bar displays some entity or list operations
3. Horizontal menu bars display intra-entity operations

Entity - Menu Bars - Vertical Menu Bar

Parties ▾		
↔ Switch	- 1	- 1 switch view from « item list » to « item »
< Previous	- 2	- 2 « item » : previous in list
> Next	- 3	- 3 « item » : position in list
🔍 Search	- 4	- 4 « item » : next in list
<hr/>		
+ New	- 5	- 5 « item » : start adding
↓ Save	- 6	- 6 « item » : save
🔄 Reload/Undo	- 7	- 7 « item list » or « item » : reload / undo / refresh
📄 Duplicate	- 8	- 8 « item » : duplicate
🗑 Delete	- 9	- 9 « item » : delete
<hr/>		
🕒 View Logs...	- 10	- 10 « item list » : perform operation that is specific of this list
🕒 Show revisions...	- 11	- 11
<hr/>		
📎 Attachment	- 12	- 12 « item » : attach one or more documents (e.g. of type docx, xlsx, etc.)
💬 Note	- 13	- 13 « item » : attach a note
🌀 Action	- 14	- 14 « item » : actions that are specific of the entity
<hr/>		
🔗 Relate	- 15	- 15
🖨 Print	- 16	- 16 « item » : print
✉ E-Mail...	- 17	
<hr/>		
📤 Export	- 18	- 17
📥 Import	- 19	- 18
<hr/>		
✕ Close Tab		- 19

Entity - Menu Bars - Horizontal Menu Bar

- 1 switch view from « item list » to « item » (*)
- 2 « individual record » : previous in list
- 3 « individual record » : position in list
- 4 « individual record » : next in list
- 5 « individual record » : start adding
- 6 « individual record » : save
- 7 « individual record » and « record list » : reload / undo / refresh
- 8
- 9
- 10 « record list » : perform operation that is specific of this list
- 11
- 12 « individual record » : print
- 13

Entity - « Item Double-Click » vs « Menu Item Navigation »

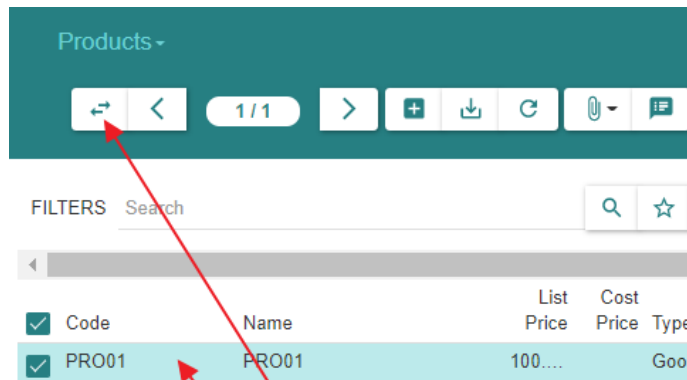

When displaying a list of items, double-click on one of them mostly generates the same result as « <- -> ».

There are however exceptions whereby :

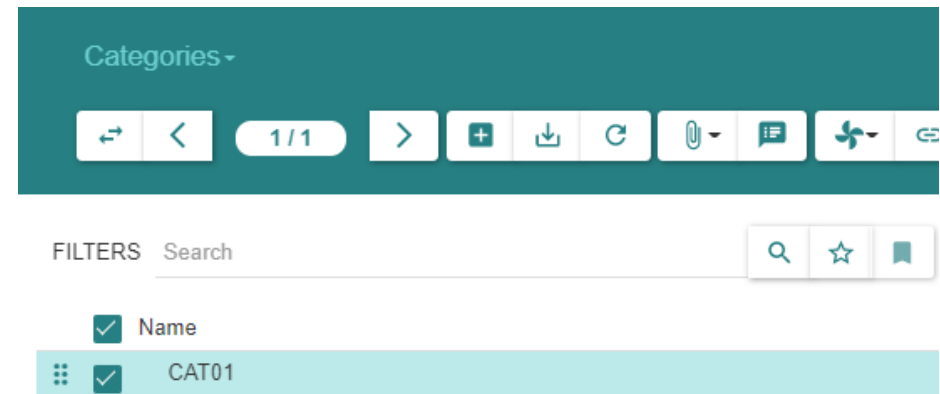

- « <- -> » displays either nothing or details about the item itself.
- « double-click » provides a « drill-down view » of objects belonging to the item

Examples

- « Chart of Accounts » <- -> : displays nothing
- « Chart of Accounts » double-click : displays the transactions for that account
- « Product Category » <- -> : displays details about the category
- « Product Category » double-click : displays the « Products » that belong to this « Category »

Double click or <- -> : same result

Double click : Products by Category (drill-down)
<- -> : Properties of Category

Application or Entity - Data Refresh Requirements

Sometimes it is necessary to refresh the screen using the « Browser Page Reload » button or the relevant menu item (see below).

This may happen e.g.

- In the case of « Switching » from « Item » view to « List » view. For instance, when state information in a « Sales Order », e.g. « Draft », has been changed in the « Item » view it might incorrectly persist in the « List » view though it has evolved e.g. to « Confirmed ».
- In the case of updating the « List of Product » sold by a « Supplier » then displaying the « Product » to show the « List of Suppliers »
- In the case of adding a « Product Variant » in the « List of Variants », it is necessary to refresh the « Product » itself to take the variant into account on the screen

Modules

Motivation

The « Application » is implemented by « Modules » that use « Database Tables » and « Files » optionally. Modules are not *explicitly* grouped into functional subject areas.

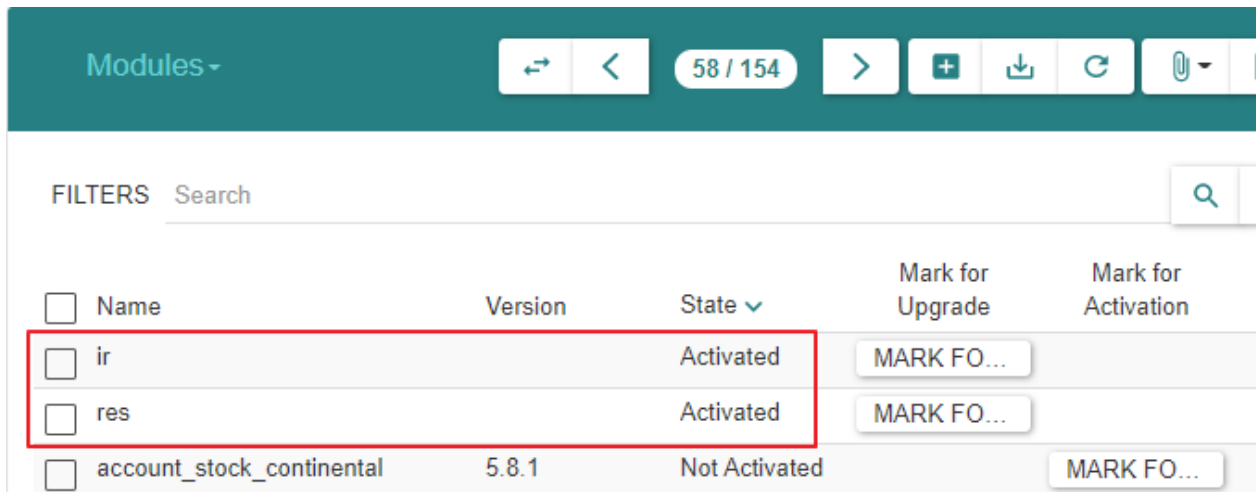

Initially, all but two modules (« ir » & « res ») are inactivated : see below.

The activation relies technically

- Either on the usage of wizards and a mutual dependency mechanism.
- Or based on their name by grouping them based on their prefix.

When modules are activated,

- The database tables they use are created if required.
- The menu items are added in the Tree on the left of the screen.

<input type="checkbox"/> Name	Version	State ▼	Mark for Upgrade	Mark for Activation
<input type="checkbox"/> ir		Activated	MARK FO...	
<input type="checkbox"/> res		Activated	MARK FO...	
<input type="checkbox"/> account_stock_continental	5.8.1	Not Activated		MARK FO...

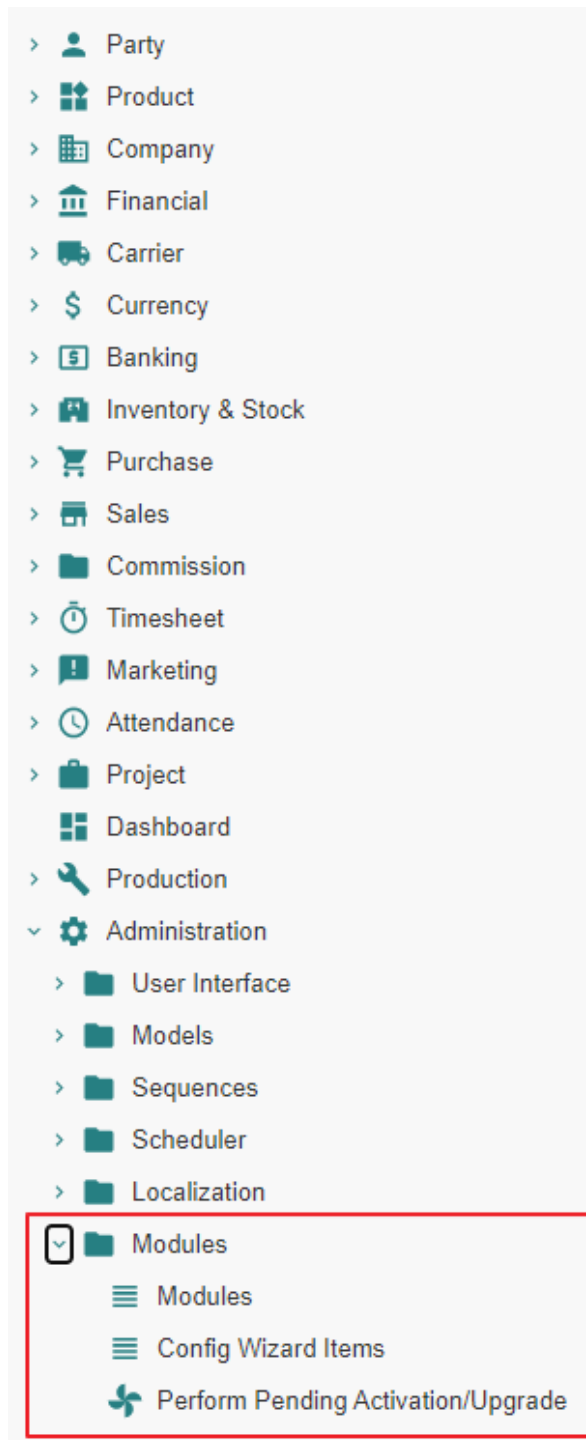

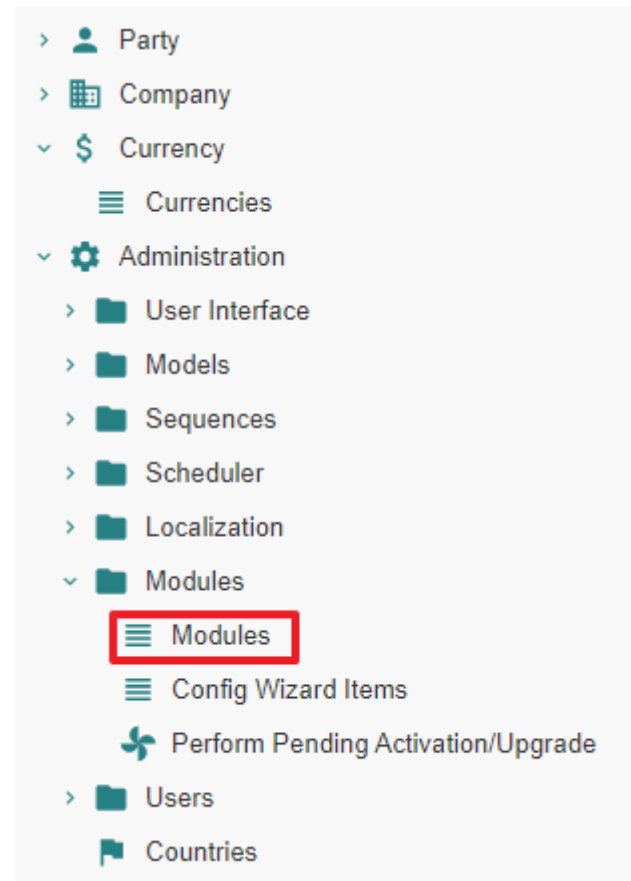

- Tryton optimizes operations by requiring activation of application modules.
- We will activate modules as we progress instead of activating all modules at once

Perform Pending Activation/Upgrade

Translate view

Modules

Growing list of menu items : initial & final list of menu items as modules are being installed

Modules

Entity	Module activation	User handling
Product	product-*	Creating product & variants
Party associated with Purchase	purchase-*	Creating supplier
Supplier Invoice		
Supplier Shipment	stock-*	
Purchase	purchase-*	Creating purchase order
Supplier Shipment		Creating supplier shipment
Supplier Invoice		Creating supplier invoice

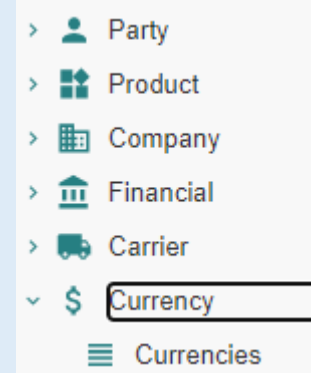

Functional intent of module can be derived from its name

Basic Configuration

Motivation

- Before examining the typical ERP transactions like « Sales », etc. we need to activate modules that support the different subject areas.
- This link refers to official documentation about a « basic configuration » :
https://tryton-administration-manual.readthedocs.io/en/latest/basic_config.html

« Country » & « Currency »

Motivation

The TRYTON database and application contain minimal database tables and application modules.

« Countries » and « Currencies » are extensively used. Hence, it is advised to :

1. Activate the corresponding application modules thereby also creating the required tables in the database.
2. Load the created tables with ISO normalised « Currency » and « Country » data

Finally, for each « Currency » of use in the « Company » operations, it is advised :

- To set the « Rate » property to 1.0 for a « Reference Currency » ; f.i. « EUR rate » = 1.0
- To set the « Rate » property to a relative value for each « Relative Currency » ; f.i. « USD rate » = 1.2
- When the « Company » operates in a single currency environment, the « 1.0 » multiplication factor is used
- When the « Company » operates in a multi-currency environment, each currency-related rate is used in addition as multiplication factor

Documentation

Currency Rates

Motivation

- Multi-currency operations are supported
- In this is required, we need to define the rates for :
 - A « Reference Currency Rate » ; that rate will be 1.0
 - One or more « Relative Currency Rates » ; those rates will be relative to the reference rate.
- Exemple :
 - Our reference currency is EUR : its rate is 1.0
 - One or our relative currencies is USD : ist rate is 1.2 (2021)
- For each relative currency, we define as many dates as we want considering those dates are « Dates From » for the relative rate applicable from that moment onward.

Setting a « Reference Currency Rate » as of « Date from »

Name: Euro **Symbol:** € **Active:** ☒

Code: EUR **Numeric Code:** 978

Rounding factor: 0.01 **Digits:** 2 **Cash Rounding Factor:**

Rates

Current rate: 1.000000

Rates

Date	Rate
✓ 2021-01-01	1.000000

FILTERS Search

Name	Symbol	Code	Numeric Code	Current rate
✓ Euro	€	EUR	978	1.000000

« EUR » is our « Reference Currency Rate ».
Hence we set the rate at value 1.0

Setting « Relative Currency Rates » as of « Date from »

Company

Financial

Carrier

Currency

Currencies

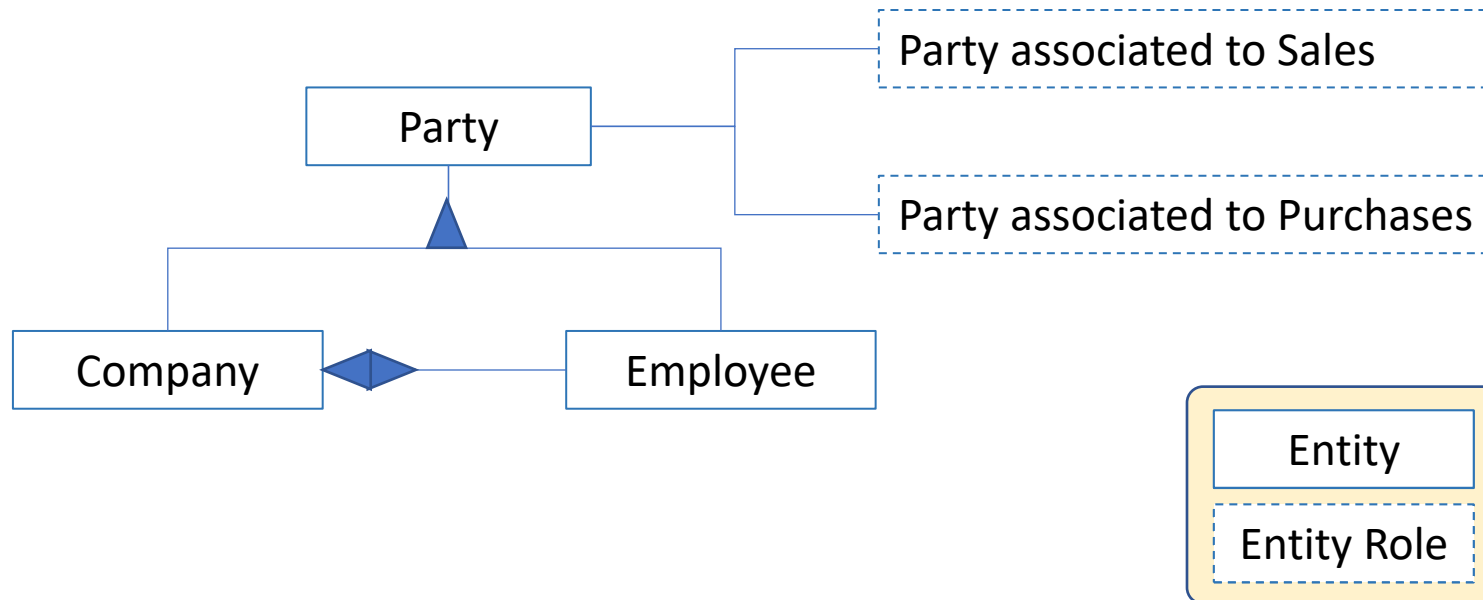

- « USD » is used in our « Company »
- So one of the « Relative Currency Rates » pertains to that « Currency ». Hence we set the rate at value 1.2 as of 2021-01-01 with respect to the « EUR »
- We can define additional « Relative Currency Rates »
 - For other currencies
 - For other « Date from » values

« Party » & « Company » & « Employee »

Motivation

We activate modules and create database content related to the following entities :

1. « Party » : an entity that represents some ERP-relevant actor
2. « Company » : a specialized « Party » entity
3. « Employee » : a specialized « Party » entity
4. « Parties associated to Sales » : a « Party » role (activated and installed later)
5. « Parties associated to Purchases » : a « Party » role (activated and installed later)

Motivation

« User » vs. « Party »

- A « User » is a user of the system with login and password.
- A « User » is not a « Party ».
- A « User » is not necessarily an « Employee » of the « Company ». F.i. he/she can be a consultant.
- The default user is « admin ».

« Party »

Motivation

A « Party » is an abstract entity that stands for the common properties of a specialized concrete entity such as « Company », « Employee », « Party associated to Purchase », etc.

We activate the modules that relate to « Party ». Subsequently, we define concrete parties :

The first approach for defining a specialized entity is :

- First define a « Party » with the idea that it will be referenced by a specialized entity.
- Subsequently define the specialized entity (e.g. a « Company ») with reference to its generic « Party » parent.

The second approach for defining a specialized entity is :

- Define the specialized entity like « Company »
- Doing so, the system lets you create the generic « Party » entity on the fly

Creation of Parties

« Party », « Company » & « Employee »

- A « Party » is an abstract entity.
- Its concrete subentities are of type « Company », « Employee », etc.
- We can define the corresponding abstract and concrete entities in two ways :
- **Method 1 :**
 - We define a « Party » « X » or « Y » by clicking on « Parties », and fill their properties conformant those inherited by the concrete entity
 - Subsequently, we define :
 - The « Company » « X » by referencing its corresponding « Party » « X »
 - The « Employee » « Y » by referencing its corresponding « Party » « Y »
- **Method 2 :**
 - We define a « Party » « X » or « Y » by clicking on « Parties », and fill their properties conformant those inherited by the concrete entity
 - We define the « Company » « X » by clicking on « Companies » and in doing so we create « Party » « X » in the process
 - We define the « Employee » « Y » by clicking on « Employees » and in doing so we create « Party » « Y » in the process
- We will use Method 1 for defining a « Company » COM01
- We will use Method 2 for defining an « Employee » EMP01

Modules - Activation

- Activating the « Company » modules creates the Menu Tree Items for « Company » as well as « Employee »
- When an indented Menu Tree Item construction exists, it means that e.g. « Companies » can be displayed as a tree of « Companies » as well as a list.
 - The top level « Company » menu will display the « Companies » in a tree manner.
 - The bottom level « Company » will display the « Companies » in a list manner.

Create « Company » COM01

Step 1

Create the « Party » COM01

Party

« Financials »

« Chart of Accounts » & « Fiscal Year and Period » & « Journal »

Documentation

[https://tryton-administration-manual.readthedocs.io/en/latest/basic_config.html#installing-a-chart-of-accounts]

[<https://tryton-administration-manual.readthedocs.io/en/latest/accounts.html>]

Precondition

- Before activating the Financial Modules, it is advised to properly configure the « Administrator » user
- The user should reference :
 - The « Current Company » field with e.g. « COM01 » i.e. the company for which the « Chart of Accounts » will be created.
 - An « Employee » field with e.g. « EMP01 » who is part of « Company COM01 »
- Under those conditions, at the end of module activation, a « Create Chart of Accounts » wizard will be able to reference « COM01 » and create the chart of accounts appropriately.

The screenshot displays the 'Users' management interface. At the top, there's a header with 'Users' and navigation icons. Below this, the 'Administrator' user profile is shown with fields for Name, Active status, Login, Password, Email, and a 'SHOW' button. The 'Main Company' and 'Current Company' are both set to 'COM01', and the 'Current Employee' is set to 'EMP01'. A table below shows the employee assignment for 'EMP01' to 'COM01' with a start date of '2021-04-01'.

Party	Company	Supervisor	Start Date	End Date
<input checked="" type="checkbox"/>	EMP01	COM01	2021-04-01	

Error conditions

- If « User Administrator » activates financial modules without referencing « Company COM01 », the creation of the « Chart of Accounts » will have to be aborted. Should this be the case, we will show how to recover from this situation and, more generally, show how to execute once again a previously aborted wizard.
- If « User Administrator » activates financial modules without referencing « Employee EMP01 », the Menu Tree Item « Financial » is not created in the left pane. We have not found a way to recover from this error situation besides restoring the database in a state « before »

The screenshot displays the 'Users' management interface. At the top, there is a teal header bar with the title 'Users' and a series of navigation and action icons. Below the header, the user profile for 'Administrator' is shown. The 'Name' field is highlighted with a red box. To the right of the name is the 'Active' status, which is checked. Below the name, there are tabs for 'User', 'Actions', 'Access Permissions', 'Applications', and 'Preferences'. The 'User' tab is selected. Under the 'User' tab, the 'Login' is 'admin' and the 'Email' is 'x@g.c'. There are fields for 'Password' (masked with dots) and a 'SHOW' button, and a 'RESET PASSWORD' button. Below these, there are two rows of dropdown menus. The first row has 'Main Company:' and 'Current Company:', both highlighted with a red box. The second row has 'Current Employee:' and 'Current Warehouse:', also highlighted with a red box. A search icon is visible at the end of the second row.

A screenshot of a database management interface showing a list of tables. The list is titled 'Tables (354)' and contains several entries, each preceded by a right-pointing arrow and a small table icon. The entries are: 'account_account', 'account_account_deferral', 'account_account_tax_rel', 'account_account_template', 'account_account_template_tax_rel', 'account_account_type', and 'account_account_type_template'. The first four entries are enclosed in green rectangular boxes, and the last two entries are enclosed in red rectangular boxes.

Account Types (1/2)

The screenshot shows a sidebar menu on the left with a tree structure. The 'Financial' section is expanded, showing 'Configuration', 'Templates', 'General Account', 'Account Types' (highlighted with a red box), 'Accounts', 'Fiscal Years', 'Journals', 'Taxes', 'Payment Terms', 'Analytic Account', and 'Pavments'. The main content area on the right is titled 'Account Types' and contains a 'FILTERS' section with a search bar. Below the filters, there is a list of account types with checkboxes. The 'Plan de types de compte (France)' is selected, and its sub-items are listed: 'Actif', 'Capital souscrit - non appelé', 'Actifs immobilisés', 'Actif circulant', 'Charges à répartir sur plusieurs exercices', 'Primes de remboursement des emprunts', 'Écarts de conversion actif', 'Passif', and 'Hors bilan'.

The screenshot shows the 'Account Types' configuration form. The 'Name' field is filled with 'Plan de types de compte (France)'. The 'Company' field is highlighted with a red box and contains 'COM01' with a selection icon. The 'Statement' field is empty. The 'Stock' field has an unchecked checkbox. The 'Parent' field is empty.

The « Account Type » contains a reference to the « Company ».

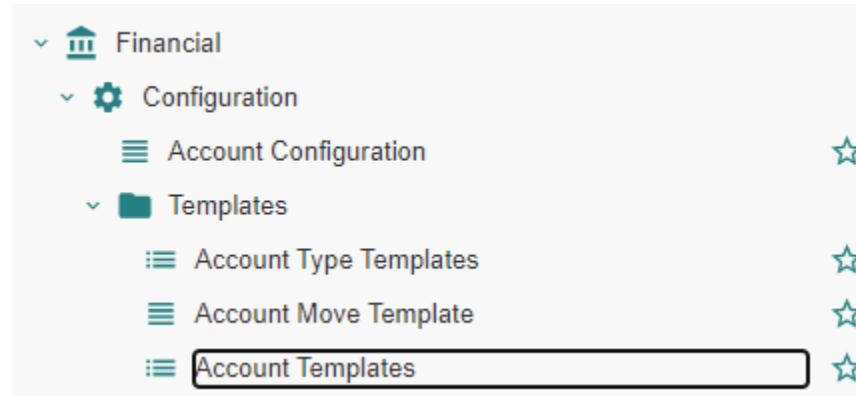

This contrasts with the « Account Type Template » which does not

Problem with closed accounts

[<https://discuss.tryton.org/t/value-for-field-account-is-not-valid/3106/9>]

```
Select * from account_account where closed = true;
UPDATE account_account SET closed = false WHERE closed = true;
```

Marc

4d

I hit the same problem with the « French » chart of account whilst creating a Sales Order. What I did :

- Run the query « Select * from account_account where closed = true; » in « Postgres / pgadmin4 »
 - This query confirmed that 252 accounts were « closed »
 - I did not bother to find out which one
 - Run the query « UPDATE account_account SET closed = false WHERE closed = true; »
 - That solved the problem : I could advance the Sales Order to « Process »
- Suggestion : whilst processing the sales order, to have the error message display one such account encountered in this state up until there are no more in that state.

Query Editor

```
1 Select * from account_account where closed = true;
```

Data Output

	id [PK] integer	closed boolean	code character varying	company integer	cre tim
1	545	true	411		202
2	338	true	1013		202
3	76	true	101		202

Query Editor

```
1 Select * from account_account where closed = true;
3 UPDATE account_account SET closed = false WHERE closed = true;
```

Data Output

UPDATE 251

Query returned successfully in 103 msec.

Query Editor

```
1 Select * from account_account where closed = true;
3 UPDATE account_account SET closed = false WHERE closed = true;
```

Data Output

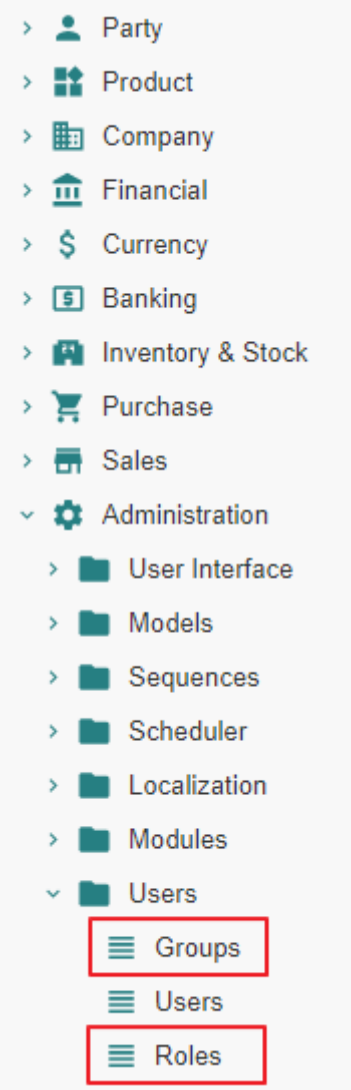

UPDATE 251

Query returned successfully in 103 msec.

Motivation

- We experiment in changing user authorizations with respect to accessing subject areas in the application
- The « User Administrator » can tailor this by exercising « User Groups » and « User Roles »

User Capabilities - Ante

State - User Capabilities

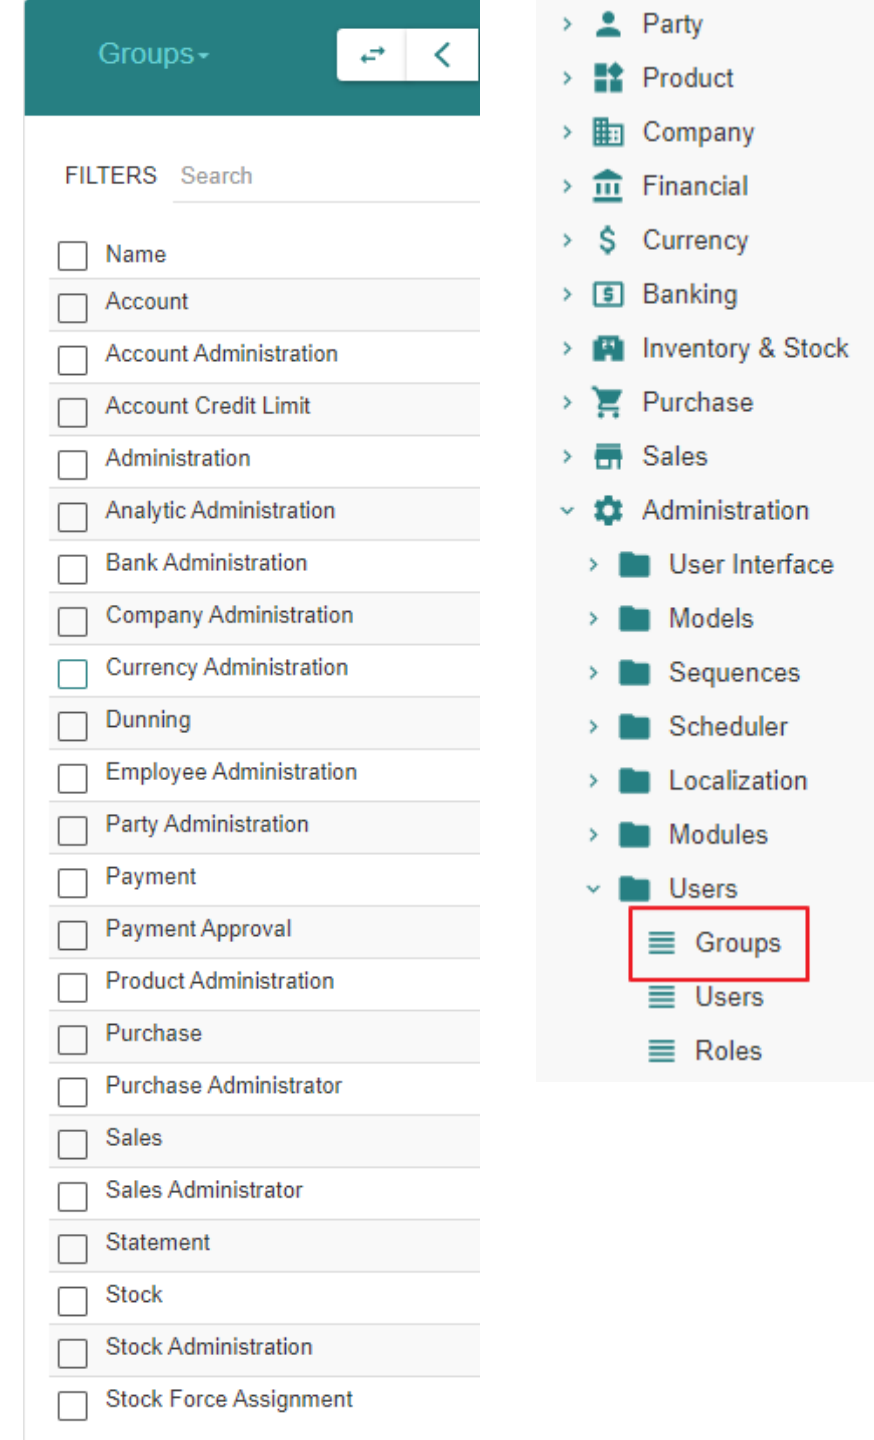

User Groups - Modify

List of « User Groups »

Linking the « User » and the « Group » is possible in two ways :

- Method 1 : displaying the choosen group then linking the user to it
- Method 2 : displaying the choosen user then linking the group to it

Attach « User Marc » to a « User Group » - Method 1

 - Roles**

Attach « User Paula » to a « User Role » 1/2

- Once a « Role » is defined, it can be referenced by a « User »
- Attaching a « Role » allows also to restrain the « from » and « to » dates

The screenshot displays the 'Users' management interface. At the top, a teal header bar contains the 'Users' label and a series of icons for navigation and actions. Below this, the user 'Paula' is selected, with an 'Active' checkbox checked. The 'Access Permissions' tab is active, showing a table of roles assigned to the user. A red box highlights the role 'Currency & Country Administration' with a 'From Date' of '2021-01-01' and a 'To Date' of '2021-12-31'. A red arrow points from this role to the 'Groups' section below, which shows a list of groups with 'Company Administration' selected.

Role	From Date	To Date
<input checked="" type="checkbox"/> Currency & Country Administration	2021-01-01	2021-12-31

Groups
<input checked="" type="checkbox"/> Company Administration
<input type="checkbox"/> Currency Administration

Attach « User Paula » to a « User Role » 2/2

- We must remember that « User Paula » has no reference so far to « Company COM01 »
- In order to obtain the intended result for « User Paula », i.e. displaying the « Country » and « Currency » Menu Tree Items, we must add that reference.
